NA Db2 TECH CONFERENCE

**Db2 AI Vectors: Powering
Modern AI Use Cases**

Shaikh Quader and Mike Springgay, IBM

Session Code: #####

Platform:

LUW

AGENDA

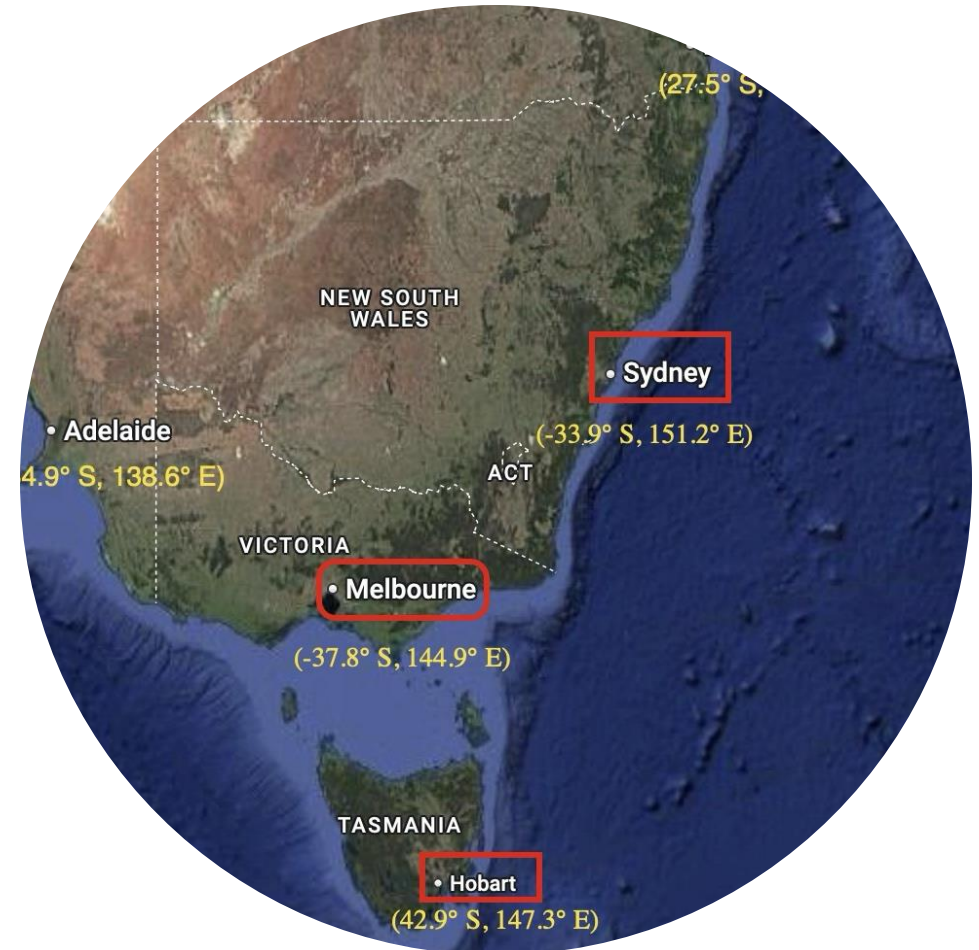

- Understanding AI Vectors
- Real-world Use Cases for Vectors
- Phase 1: Vector Support in Db2
- Db2 Vectors: The Road Ahead
- Demo

Which Two Are More Similar?

What is a vector?

- A list of numbers, like (1, 2)
- Represents a point in space
- Like map coordinates (e.g., Sydney: -33.9° S, 151.2° E)
- You can measure distance between two vectors

Real-world Entities on Vector Space

Vector Embedding: Turning Data Into Vectors

Common Vector Distance Metrics

Cosine: angular directions, no magnitude

Euclidean: straight line distance

Euclidean²: relative distance

Negative Dot: direction + magnitude

Manhattan: city block distance

Hamming: bit differences

$u = [1, 0, 1, 1]$
 $v = [1, 1, 0, 1]$
 Hamming = 2

So, what? What can Vectors do for you?

ANOMALY DETECTION IN CLAIMS

Phase 1 Vector Support at Db2

VECTOR type:

- FLOAT32 vectors
- INT8 vectors
- Max dimension:
 - 8168 (FLOAT 32)
 - 32672 (INT8)

**LLM Apps Dev Support:
LangChain Connector**

VECTOR Functions:

- VECTOR_DISTANCE – between a pair of vectors
- VECTOR constructor – string to vector type
- VECTOR_SERIALIZE – vector type to string
- *VECTOR_NORM* – computing vector magnitude
- VECTOR_DIMENSION_COUNT – counting vector elements

Vector Data Type

Syntax:

VECTOR (<dimension> ,<coordinate-type>)

Example:

CREATE TABLE VTABLE (RV VECTOR(100, REAL), IV VECTOR(300, INT8))

Describe on Vector Column

```
$ db2 describe table VTABLE
```

Column name	Data type schema	Data type name	Column Length	Scale	Nulls
RV	SYSIBM	VECTOR(FLOAT32)	100	0	Yes
IV	SYSIBM	VECTOR(INT8)	300	0	Yes

```
1 record(s) selected.
```

Vector Distance Function

Syntax:

```
VECTOR_DISTANCE -- ( -- vector1 --,-- vector2 --+-- ,-- COSINE -----+-- )
                  +-- ,-- DOT -----+
                  +-- ,-- EUCLIDEAN -----+
                  +-- ,-- EUCLIDEAN_SQUARED --+
                  +-- ,-- HAMMING -----+
                  +-- ,-- MANHATTAN -----+
```

VECTOR constructor and serialize

VECTOR Constructor

```
UPDATE VECTOR_TB SET RVECTOR = VECTOR('[0.123, -0.456, 0.789]', 3, REAL) WHERE ID = 1;
```

Returns a VECTOR(3, REAL)

VECTOR_SERIALIZE

```
SELECT VECTOR_SERIALIZE(RVECTOR) as VECTOR FROM VECTOR_TB FETCH FIRST 1 ROWS ONLY
```

Result:

VECTOR

[-0.0762727037,0.0559631996,-0.0107453996]

1 record(s) selected.

More VECTOR functions

VECTOR NORM – computes the magnitude of a vector

```
SELECT VECTOR_NORM(VECTOR('[-0.0762727, 0.0559632]', 2, REAL), EUCLIDEAN)
FROM SYSIBM.SYSDUMMY1
```

```
-----
+9.46012923776943E-002
```

VECTOR_DIMENSION_COUNT – returns the dimension of a vector

```
SELECT VECTOR_DIMENSION_COUNT(RVECTOR) as VEC_DIM FROM VECTOR_TB FETCH FIRST 1 ROWS ONLY
```

```
VEC_DIM
-----
```

```
3
```

Roadmap

Vector Index

approximate nearest neighbor (ANN) support

Scaling search to larger vector space

Cloud AI platforms integration

Generating embeddings and text using Cloud AI APIs

Demo: Finding Similar Products Using Vector Search in Db2

LUW

An aerial night view of a city skyline, likely Atlanta, Georgia, featuring prominent skyscrapers like the Bank of America Tower. The sky is a vibrant mix of purple and blue, suggesting twilight. The city lights are visible, and a multi-lane highway with light trails from traffic is in the foreground.
